Key Words: Tower/ Antenna / RF Safety / EMF / EME Guard XS / EMF monitoring

MVG's EME Guard XS reaches new heights

Significant sales of EME Guard XS devices have been achieved since its launch in 2014, with future orders in the pipeline. EME Guard XS is a 'must-have' RF Safety tool; an EMF monitoring device which alerts all personnel operating near antennas to excessive exposure to RF levels.

EME Guard XS constantly monitors the electromagnetic field from 80 MHz to 6 GHz. Whenever the acceptable limits have been exceeded, its built-in audio and visual alarms alert the user. EME Guard XS is extremely easy to use, creating a safer working environment in the areas of antenna installation and maintenance.

Talking about this latest success, Nicolas DOARE - Sales Manager said *"The reason for the high sales is simple. EME Guard XS has been designed and positioned as a simplified version of another well known MVG product, "EME Guard". This marketing strategy has allowed us to deliver a more affordable solution whilst still maintaining accurate monitoring, thanks to the tri-axis sensors used in the EME Guard. This now allows our customers to provide one EME Guard XS for every employee. More and more companies are adding EME Guard XS to the list of mandatory safety equipment they provide to their employees. Simply, it is just as important as a harness or helmet."*

"Our global distribution network has also contributed to the success, as it helps MVG be closer to the customer, providing a better understanding of customer needs."

Ulrich Diehl, from distributor eudisa GmbH, in Germany explains *"The industry trend is that organisations now recognize that they have a responsibility to protect their workers from electromagnetic fields when working on antennas. EME Guard XS is the best solution on the*

market today to meet this need. It is the most affordably priced solution on the market, as well as being small, portable and very easy to use.”

Nicolas concludes “With sales showing no sign of slowing we are looking forward to hitting higher targets in the very near future. The level of sales for EME Guard XS supports our impression of the market trend, which is that the industry are looking for a device which delivers simple yet effective RF Safety.”

About EME Guard XS

EME Guard XS is suitable for personnel working near antennas, including installation and maintenance workers, broadcast, PMR, mobile phone operators or regulatory bodies. It provides accurate monitoring with tri-axis sensors. An instant audio and visual alarm will sound as soon as safe levels are exceeded. The design is robust, reliable and user-friendly.

Safety recommendations

EME Guard XS helps you to meet the latest industry safety recommendations, including:

- ICNIRP
- FCC 96-326
- Safety Code 6
- 2013/35/UE

About MICROWAVE VISION GROUP

MICROWAVE VISION Group – MVG – (NYSE-Euronext: ALMIC) is a leading global manufacturer with four key specialisms AMS (Antenna Measurement Systems), EMC (Electro-Magnetic Compatibility), EIC (Environmental & Industrial Control), and NSH (National Security & Healthcare). With an industry presence spanning nearly 20 years, MVG's unique expertise encompasses the visualization of electromagnetic waves (EMW) used by many products in our daily lives, smartphones, computers, tablets, cars, trains and planes, for example.

MVG's mission is to develop technology which will deliver significant added value to its users. This includes the simulation, monitoring and recording of EMF levels then, alerting users where over exposure occurs. The aim is to help companies keep within regulatory limits and through effective communication reduce any public concerns. MVG is located in 12 countries and has over 350 employees and a loyal customer base of international companies. The Group generated revenues of € 56.7 million in 2014. MVG has received the BPI "Innovative Enterprise" certification, and is eligible for the PEA-PME. | For more information, visit: <http://www.mvg-world.com>
